Reasons for allowance

The following is an examiner's statement of reasons for allowance:

The present invention is drawn to a circuit capable of comparing higher voltage signals utilizing transforming means, combining means, feeding means, comparing means, generating means recited in claims 1-31. None of the prior art disclosed or suggested to show the particular structure and/or the particular operation recited in these claims namely: the combination of all method steps recited in claim 1; "means for transforming a static high voltage supply level into static currents", "means for combining ... into a resulting current input signal", "means for combining ... into a resulting reference current input", "means for feeding ... into a current comparison circuit", "means for comparing designated as said current comparison circuit" in combination with "means for transforming ... proportional current signal", "means for transforming ... proportional current reference" and "means for generating ... current comparison circuit" as recited in claim 14.

The prior art references submitted by the applicant on IDS forms received on 10/14/03 & 01/28/04 were reviewed and considered. These references appear to be the best references with respect to the claimed invention and closely matched most of the references found during the examiner's searches. However, as stated above, the combination of all the elements is not disclosed. Therefore, the claims are patentably distinct over all these prior art references of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
